

# BLACKFIN AURA | Cold fitting

Opticians must follow these instructions when fitting prescription lenses in any of the models in the AURA collection. This must be done "cold" and without heating the acetate rim.

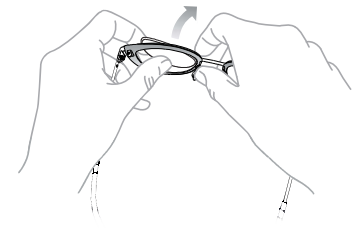

The demonstration lens is removed by simply pressing down on it. You do not need to open the rim lock or remove the acetate part.

## COLD FITTING ON A BLACKFIN AURA

1

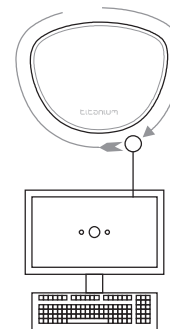

2

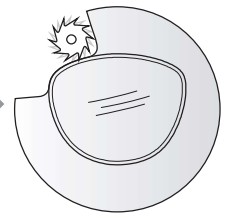

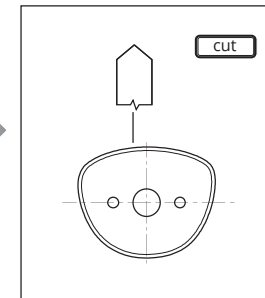

It is not necessary to open the rim lock to remove the lens.

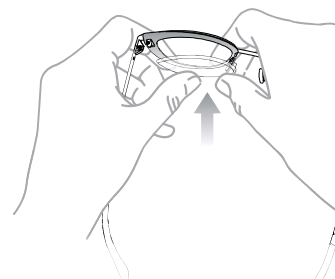

3

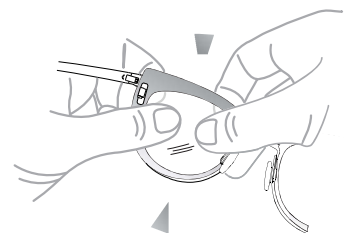

4

5

6

Do not heat the acetate rings.
