

MAD IN ITALY UP!**MOUNTING INSTRUCTIONS**

For proper assembly of the lenses, we suggest the following precautions.

Once the size of the lens has been determined, including through remote beveling, we recommend grinding the lens to a slightly smaller size, in any event not larger than the demo lens.

Mount the lens cold to avoid stretching on the frame.

We recommend mounting the lenses from the front. To clean the glasses DO NOT use products containing alcohol or acetone.

IMPORTANT WARNINGS

- Lens must be cut using pattern or demo lens.
 - If lens is cut too big, it may tear the nylon rim and void warranty.
 - This will also eventually cause stress marks/cracks to appear on the nylon.
- DO NOT HEAT, this could damage the nylon finish.
- DO NOT USE ALCOHOL or ACETONE on any nylon components.
